TANMAY KSHIRSAGAR

Cloud & DevOps Engineer (Fresher)

Pune, India | tanmaykshirsagar001@gmail.com | github.com/Tanmay1112004 | linkedin.com/in/tanmay-kshirsagar

PROFESSIONAL SUMMARY

B.Tech Computer Engineering graduate and Cloud/DevOps fresher with hands-on practice in AWS, Linux administration, shell scripting, relational databases and Git/GitHub. Built and operated a full LAMP-stack web application on AWS EC2, including database security, automated backups and service troubleshooting. Familiar with Docker, Kubernetes, Python, Terraform and CI/CD, with a strong interest in cloud operations, automation and reliability. Seeking an entry-level Cloud Engineer, DevOps Engineer, AWS/Cloud Support or Junior SRE role.

TECHNICAL SKILLS

Cloud:	AWS, EC2, AWS CLI, Security Groups, IAM Fundamentals, Cloud Computing
DevOps:	DevOps Fundamentals, CI/CD Concepts, Infrastructure as Code Fundamentals, Automation
Linux:	Linux Administration, SSH, Processes, Services, Package Management, Troubleshooting
Web/DB:	Apache HTTP Server, PHP, MySQL/MariaDB, Cron, Prepared Statements / SQL Security
Containers:	Docker, Kubernetes Fundamentals
Programming:	Python, PHP, Bash/Shell Scripting
Version Control:	Git, GitHub, Branching, Merge, Pull Requests
Infrastructure:	Terraform Fundamentals, Networking Fundamentals, Server Monitoring

PROJECTS

Enterprise Linux Web & Database Administration (LAMP Stack) *AWS EC2, Apache, PHP, MariaDB, Bash, Cron*

- Deployed a full LAMP stack (Apache, PHP, MariaDB) on an AWS EC2 Amazon Linux instance, building a CRUD web application with parameterized queries and a least-privilege database user instead of root access.
- Automated system health checks and database/website backups with Bash scripts, scheduling recurring backups via Cron and pruning old backups automatically.
- Practiced service troubleshooting and log analysis using systemctl, journalctl and Apache logs to diagnose and resolve simulated service failures.

Linux Server Health Monitoring Automation Using Shell Script *Linux, Bash/Shell, Automation*

- Developed a Bash script to automate routine Linux server-health checks.
- Monitored CPU usage, memory utilization, disk usage and running processes using top, free, df, ps and grep.

AWS EC2 Infrastructure Automation Using AWS CLI *AWS, EC2, AWS CLI, Linux, SSH*

- Configured AWS CLI and practiced EC2 operations through command-line tools, including instance launch, key pairs, Security Groups and SSH access.
- Built understanding of managing cloud infrastructure through CLI-based automation.

EDUCATION

B.Tech – Computer Engineering 2026

Dr. Babasaheb Ambedkar Technological University, Lonere (DBATU)

Cloud Computing & DevOps Training — Ethans Tech, Pune (Ongoing)

Hands-on training in AWS, Linux, DevOps, Git/GitHub, Docker, Kubernetes, Python, Terraform and CI/CD.

CAREER TARGET & AVAILABILITY

Target Roles: Junior DevOps Engineer, Cloud Engineer, Cloud Support Engineer, AWS Support Engineer, Cloud Operations Engineer, Associate Cloud Engineer, Junior SRE

Status: Fresher / Entry-Level | **Availability:** Full-time, immediate | **Location:** Open to relocation and hybrid/work-from-office
